

AltaLIS Releases New LiDAR DEM!

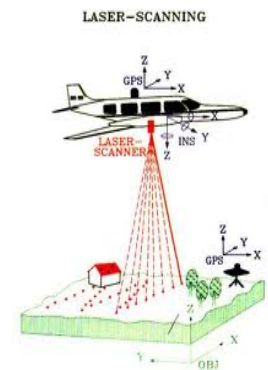

May 2011

AltaLIS is pleased to announce that a new DEM product is now available for parts of Alberta, BC and Saskatchewan. The new **LiDAR15 DEM** was created by extracting elevations at a 15 meter spacing from LiDAR data captured by North West Geomatics primarily from 2007 to 2010.

Elevation data collected with LiDAR (Light Detection and Ranging) technology enhances the quality of relief, hydrological features, sub-catchment boundaries (basins and watersheds) and drainage networks.

The **LiDAR15 DEM** features 30cm vertical accuracy, and is available in two formats: Arc Grid ASCII and LiDAR15 ASCII.

For a detailed description, coverage area map and sample, visit the [LiDAR15 DEM](#) webpage at AltaLIS.com.

Contact the Order Desk at info@altalis.com or call (403)716-3490 to inquire.
